

FIT3171 Assignment 1A- Assumptions

Nadeem Emadeldin Hamed Hamed Abdelkader - 30146224

Assumptions Made:

- For the **Visit** entity: visit_date, visit_time, and attending_vet are used as keys because no vet can be at more than 1 place at the same date and time, so it is unique for every visit.
- For the **Visit** entity I added a original_visit attribute that will contain the subsequent visit, if there is no subsequent visit (this is the first visit) it will contain "None".
- For the **Vet** entity, I added a area_of_specialisation attribute that will contain the vet's area of specialisation, if there isn't one (the vet is not a specialist vet) it will contain "None".
- For the **Drug** entity: drug_id, animal_id, and visit_date are used as keys because it isn't possible for the same animal to be prescribed the same drug on the same day but with different dosage or frequency of administration, so it is unique for every prescription.
